
Full-stack developer with 3+ years of hands-on experience building responsive, user-facing apps with clean architecture and practical utility. Projects include a Hackathon-winning geospatial tool and a pet care scheduler with SMS reminders. Proficient in Go, React, and PostgreSQL; passionate about building tools that solve problems and scale.

Core Skills

Web Development • REST APIs • Databases • UI/UX • Technical Communication • Team Leadership • Client Collaboration • Project Ownership • Troubleshooting & Debugging • Process Optimization • Adaptability • Continuous Learning

Projects

Animal Family — Pet Care Scheduler & Reminder App

Stack: Go backend, PostgreSQL (Railway), Next.js frontend, React, Tailwind

- Developed a Progressive Web App to manage daily animal care tasks across species
- Integrated automated SMS reminders and complex care scheduling logic
- Used relational schema design to track tasks, enclosures, and species-specific needs

TrashMap ATX — Geospatial Data Mapping for Austin Trash Reports

Stack: Next.js, React, Pigeon-Maps, PostgreSQL (Supabase), Tailwind

- Built a community-driven web app using Austin's 311 API to visualize litter locations
- Added support for user-submitted data and event coordination for cleanup efforts
- Awarded 1st Place Overall and 1st Place in Design at RiverHacks 2024

Experience

Freelance Web Developer

Jan 2023 – Present

- Created full-stack applications for local clients, including an artist's eCommerce site and a pet grooming salon site
- Implemented analytics tools, designed schemas, and deployed apps using modern frontend/backend stacks
- Translated client needs into responsive, goal-driven products

General Manager – Pet Supplies Plus

Feb 2022 – Oct 2022

- Led and trained a team of 10+, improving daily operations and customer experience
- Applied process improvements using POS and sales data to boost efficiency
- Developed communication and leadership skills applicable to software teams

Education

Austin Community College, Austin TX

Associate of Applied Science in Computer Programming
Bachelor of Science in Software Development

Expected Fall 2026
Expected 2028

Technical Skills

Programming Languages

JavaScript/TypeScript · Golang · Python · Java · C · SQL · HTML · CSS

Frontend Architecture

- Experienced with vanilla HTML, CSS, and JavaScript for lightweight or static pages
- React (Hooks, Context API), Next.js (App Router), Tailwind CSS, ShadCN UI
- Component-based design, form handling & validation, responsive layouts, accessibility (ARIA, keyboard nav)
- State management via local state, lifting, Zustand, and React Query

Experimented with SSR, CSR, and SSG for performance tuning in data-heavy UIs. Focused on modular, traceable component design to manage complex forms and task logic

Backend Architecture

- Go (net/http, Gorilla Mux), Node.js (Express), Flask
- RESTful API design, routing/middleware patterns, secure environment variable usage
- Auth: JWT, sessions, and third-party hosted authentication
- Task schedulers (e.g., Goroutines), rate limiting, logging & error handling
- API integration and consumption (internal and third-party services)

Chose Go for my pet care app backend to boost speed and reduce architectural complexity vs. a Next.js-based prototype

Database and Storage

- PostgreSQL, Supabase (DB, Storage, RLS), MySQL, Oracle DB
- ORMs: Prisma (JS/TS), GORM (Go)
- SQL joins, aggregations, indexing, and relational schema design
- Data normalization, migrations, and version control tools
- Used S3 bucket storage for public/private file uploads and media asset management

Designed an entity-relationship diagram for complex links between species, enclosures, users, and tasks in a pet care app

Tooling, Cloud, and Hosting

- Git/GitHub, Docker (local dev, deploys), Railway (Go + DB hosting), Supabase (BaaS)
- Vercel (Next.js SSR), Netlify (static hosting), AWS, DNS setup, SSL config
- Postman, cURL, Makefiles for automation, Linux CLI (zsh, package managers)
- Basic CI/CD with GitHub Actions

Managed full app lifecycle: local dev → deployment, with domains, SSL, environment variables, and service integration across Supabase, Railway, Vercel, Netlify

Personal

Passionate about both programming and animal care, I spend my free time building software projects and taking care of 16 animals across various species. I'm excited to join a software team where I can grow my skills and contribute meaningfully. My long-term dream is to one day open a pet store that blends technology and animal care.
